1. Purpose of the site

The wireframe should clearly show at a glance what the main purpose of the website / application is. Is the most important content the first thing you notice? Are the system requirements met?

Screen	What is wrong?	How to improve?
1	No clear indication it is about public transport	Show transport options without the dropdown
1	Two arrows make navigation very confusion	Make them smaller or leave them out

2. Content

The content should be useful and meaningful. Is anything important missing from the page? Is there anything on the page that shouldn't be there? Which content is related and how?

Screen	What is wrong?	How to improve?
9	The icons don't really show what the procedure is	show all icons
10	First shows 2 icons for transport and then 4?	Relate all options to eachoter, give previeuws
10	Not clear how the transport methods connnect	Don't add information to previeuws that were given

3. Layout

Do you know what all of the elements on the page are? Are the sizes and placement of the elements appropriate? Do all of the labels make sense?

Screen	What is wrong?	How to improve?
1	No structured format for data and time	Use structured format
1	Have transport options after search	Switch them

4. Navigation

Are the transitions between screens clear? Can you get to all major sections of the site from here? Should you be able to? Is the navigation structure (menus, buttons, hyperlinks etc.) easy to comprehend and complying with standards? Does the user know which page / screen she is currently looking at?

Screen	What is wrong?	How to improve?
all	No back button	Use back button

5. Calls to action

Are the interactive elements clearly presented in the wireframe? Does the user know which elements they need to interact with and how? Are the responses to those actions clear?

Screen	What is wrong?	How to improve?
1	Search option small	Could be bigger
1	Search not suitable for this option in my opinion	Use different synoniem
